A first-class Personal ELT for the price of coach.

High quality doesn't always come with a high price. Take ACR's new AeroFix™ 406 GPS I/O. It's surprisingly affordable, especially considering everything it does. The AeroFix is a Personal Locator Beacon that transmits on both 406 and 121.5 MHz. Having a personal beacon boosts your chances of being found quickly. Carry the AeroFix in your flight suit and be assured that if you survive a crash, your AeroFix will also. It will bring help more quickly than waiting for the system to locate a conventional C91a ELT or for rescuers to find you using their own

resources. And if you're injured, every saved minute counts.

When interfaced with your aircraft's GPS, the AeroFix transmits your LON/LAN on the very first burst, guaranteeing that your distress message reaches the nearest rescue center ASAP.

Or, for simplicity, rely on the onboard GPS built right into the AeroFix. Weighing just 12 ounces, it's easy to carry around, too. Pop it in your gear bag, mount it on the plane's console, or attach it to your flight vest. The AeroFix 406 goes where you go and performs with flying colors when you need it most.
